

Chapter 4 Review

Mr. Sorice

Integrated Math III
November 10, 2019

Agenda

- 1 Grading & Question to ponder
- 2 Today's objective and work
- 3 End of class

How Would You...

Think about this and we'll talk about it after:

How Would You...

Think about this and we'll talk about it after:

How would you find the zeros of:

$$P(x) = 5x^5 - 30x^4 - 60x^3 + 610x^2 + 55x - 580?$$

How Would You...

Think about this and we'll talk about it after:

How would you find the zeros of:

$$P(x) = 5x^5 - 30x^4 - 60x^3 + 610x^2 + 55x - 580?$$

Think about that while we grade yesterday's work:
4-8: 11-37 odds & 52-62 evens.

Question to Ponder, Revisited

How would you find the zeros of:

$$P(x) = 5x^5 - 30x^4 - 60x^3 + 610x^2 + 55x - 580?$$

Question to Ponder, Revisited

How would you find the zeros of:

$$P(x) = 5x^5 - 30x^4 - 60x^3 + 610x^2 + 55x - 580?$$

Consider these tools:

- 1 Make candidates with the Rational Zero Theorem and check them with synthetic substitution.
- 2 Factor P .
- 3 Generate a graph and look for x -intercepts.

Question to Ponder, Revisited

How would you find the zeros of:

$$P(x) = 5x^5 - 30x^4 - 60x^3 + 610x^2 + 55x - 580?$$

Consider these tools:

- 1 Make candidates with the Rational Zero Theorem and check them with synthetic substitution.
- 2 Factor P .
- 3 Generate a graph and look for x -intercepts.
- Which do we like best?

Question to Ponder, Revisited

How would you find the zeros of:

$$P(x) = 5x^5 - 30x^4 - 60x^3 + 610x^2 + 55x - 580?$$

Consider these tools:

- 1 Make candidates with the Rational Zero Theorem and check them with synthetic substitution.
- 2 Factor P .
- 3 Generate a graph and look for x -intercepts.
 - Which do we like best?
 - Would they all work?

Today's Objective and Work

We have a complete set of tools to use to deal with polynomials. Let's take this time to review what we know and can do.

Today's Objective and Work

We have a complete set of tools to use to deal with polynomials. Let's take this time to review what we know and can do.

Practice using our polynomial tools to solve a wide variety of problems. Consider which tool to use as you attack each problem.

Today's Objective and Work

We have a complete set of tools to use to deal with polynomials. Let's take this time to review what we know and can do.

Practice using our polynomial tools to solve a wide variety of problems. Consider which tool to use as you attack each problem.

Today's Classwork:

- 4-Review (p. 259): 1-47 odds, 53 & 55.

End of Class

Today, we reviewed our various tools to deal with polynomials. We approached various problems, considering which tool to use for which problem.

End of Class

Today, we reviewed our various tools to deal with polynomials. We approached various problems, considering which tool to use for which problem. Tomorrow, we'll continue along the same lines as we review for our test.
